

# Compatibility List for CHARGE-V GmbH Charging Station System Contracts

Last updated: November 2024

This Compatibility List contains a list of compatible technologies for proper operation of CHARGE-V charging station systems, and the systems' restrictions that should be taken into account if other technologies are utilised. However, it is important to note that the restrictions listed here are not exhaustive. This means that in addition to the explicitly mentioned aspects, there may be other restrictions or conditions that may also be relevant and are not mentioned.

The points listed serve to highlight the most important known restrictions. However, not all known technology providers have been tested for compatibility and restrictions, which means not every relevant restriction could be identified. In addition, new findings or unforeseen circumstances may arise that were not explicitly addressed in our review.

For this reason, we recommend that you consult with us and the manufacturer or provider before using providers other than those mentioned in section 1 so as to identify any restrictions and ensure smooth and secure application.

<b>1. Fully Compatible Providers</b> .....	<b>1</b>
<b>2. Restrictions When Using Other Providers</b> .....	<b>1</b>

## 1. Fully Compatible Providers

- 1.1. Mobility service provider
  - 1.1.1.) Monta (Monta Platform GmbH)
